Software Engineer · Origin Energy

Hi Origin Energy team,

Over the past few years, I've built my career in mobile engineering, but the work that has pulled me forward most has been the moments where I could shape the whole product, not just one client. That is what pushed me to start moving into full stack engineering, and it is why the Software Engineer role at Origin stands out to me.

Recently, I built a customer-facing web platform end to end using React, backend services, and a relational database. It cut manual resume tailoring effort by 80% and gave me real experience owning the full path from interface to API design, deployment, and ongoing improvement. Before that, I spent years building production apps, integrating secure authentication with Auth0, improving reliability, and working closely with cross-functional teams to solve real customer problems. That mix taught me how much I enjoy connecting product thinking with solid engineering.

What I like about this role is the chance to do exactly that in a collaborative squad and on digital experiences that matter to customers every day. Origin's focus on finding better ways, working together, and owning impact matches how I like to work. I'd bring strong delivery habits from mobile, proven hands-on full stack work, and a genuine drive to keep growing into the kind of engineer who can contribute across the whole platform.

Kind regards,
Hai Son Tran
