SUMMARY

Senior mobile engineer with 5+ years of experience delivering production applications across Kotlin, JavaScript, TypeScript, React, Node.js, Auth0, REST APIs, and RDBMS-backed systems. Looking to expand into full-stack development to deepen expertise in systems and architecture, with recent hands-on work building customer-facing web platforms, backend services, cloud deployments, and automated delivery pipelines. Brings strong experience collaborating in Agile cross-functional teams, integrating APIs and authentication platforms, and improving reliability across digital products.

PROFESSIONAL EXPERIENCE

Fullstack Software Engineer

July 2024 – Present

Freelancer

- Built an AI-powered customer-facing web platform end to end using Next.js, React, Node.js, Express, PostgreSQL, Supabase, and OpenAI API, reducing manual resume tailoring time by 80% and improving generation speed for users.
- Designed and implemented REST APIs, database-backed content pipelines, and cloud deployment workflows to improve feature delivery efficiency by 30% across a production-ready full-stack system.
- Delivered two public websites for an Australian founder to support brand, services, and charity workflows, reducing manual appointment handling by 70%.
- Maintained and released bug fixes for an Android automotive platform using Kotlin, Coroutines, Flow, Jetpack Compose, AOSP, and AAOS, improving lifecycle handling and display ordering stability by an estimated 20%.

Software Engineer

November 2023 – June 2024

VMO Holdings

- Built and maintained production application modules for a digital healthcare product, collaborating with cross-functional stakeholders on architecture, delivery goals, and customer-facing functionality.
- Integrated RESTful and GraphQL APIs with secure authentication flows and robust error handling, reducing API-related defects by 18% and improving client-server reliability.
- Set up Azure DevOps CI/CD pipelines with linting, automated testing, build, and deployment stages, cutting manual release effort by 25% and improving deployment consistency.
- Maintained at least 80% code coverage through unit, UI, and integration testing, contributing to a 15% drop in post-release issues.

Software Engineer

January 2022 – October 2023

TDA Vietnam

- Directed product architecture and technical delivery for a workforce application used by a Japanese HR client, supporting releases that contributed to 100,000+ downloads across the App Store and Play Store.
- Integrated Auth0, AWS Amplify, Firebase, and REST-based services to support secure authentication, cloud-backed features, telemetry, and faster production troubleshooting.
- Built an AWS analytics pipeline using Pinpoint, Kinesis, S3, and Athena to support debugging and troubleshooting workflows, reducing manual investigation effort by 15%.
- Implemented CI/CD pipelines with GitHub Actions and Fastlane, accelerating release cycles by 20% and reducing manual deployment overhead.

BKIT Software

- Collaborated in Agile cross-functional teams to develop and maintain production mobile applications, improving release consistency and shortening development turnaround by 15%.
- Set up reusable project templates using Clean Architecture and MVVM/MVP patterns, reducing project setup effort by 25% and improving maintainability.
- Designed SQL databases and improved query performance with indexes and database functions, increasing performance by 20% while strengthening data protection through encrypted fields.
- Published 3 applications to the Google Play Store, including one that exceeded 1M installs.

TECHNICAL SKILLS

Languages: Kotlin, TypeScript, JavaScript, Python, Java, SQL, Dart, HTML5, CSS3

Frameworks & Libraries: React, Next.js, Node.js, Express, Spring Framework, GraphQL, Tailwind CSS, Jetpack Compose, Coroutines, Flow, Mongoose, EJS, jQuery

Databases: PostgreSQL, MongoDB, MySQL, SQLite, Supabase, DynamoDB, Amazon RDS

Cloud & DevOps: AWS, Azure, Docker, Docker Compose, Vercel, GitHub Actions, Fastlane, Azure DevOps, CloudFormation, Amazon EC2, Amazon S3, Amazon CloudFront, AWS Lambda, Amazon API Gateway, Amazon CloudWatch, Amazon EventBridge, Amazon SQS, AWS Step Functions, AWS Amplify, AWS Pinpoint, AWS Kinesis, Amazon Athena

Authentication, APIs & Tools: Auth0, OpenAI API, Stripe API, Swagger, Firebase, Crashlytics, Mixpanel, Git, Postman, BrowserStack, App Center, Patrol, JSON

PROJECTS

Resumie<https://resumie.space>

TypeScript, Next.js, React, Tailwind CSS, Node.js, Express, Supabase, PostgreSQL, OpenAI API, Stripe API, Vercel

- Built a production-ready full-stack platform with Next.js frontend, Node.js and Express backend services, PostgreSQL via Supabase, and Vercel deployment for public usage.
- Designed ATS-friendly document generation pipelines that reduced manual resume editing effort by 80% and improved customization speed through database-backed AI workflows.
- Implemented a GitHub profiling engine that extracts repository signals and project context to improve resume-job matching for software engineering roles and support structured content generation.
- Integrated OpenAI API for AI-generated content and Stripe API for payments, combining model-driven automation, backend orchestration, and product monetization.

High-Availability WordPress and Serverless E-Commerce Platform

AWS, Amazon VPC, Amazon EC2, Application Load Balancer, Auto Scaling, Amazon RDS, Amazon S3, CloudFormation, Amazon CloudWatch, Amazon API Gateway, AWS Lambda, DynamoDB, Amazon Cognito, Amazon CloudFront, Amazon EventBridge, Amazon SQS, AWS Step Functions, WordPress, MySQL, HTML, CSS, JavaScript

- Designed and deployed a multi-AZ AWS WordPress platform using VPC, EC2, ALB, Auto Scaling, RDS MySQL Multi-AZ, read replica, and S3 to improve reliability, scalability, and application/database isolation.
- Automated infrastructure provisioning with CloudFormation network and application stacks, enabling repeatable deployment of VPC, routing, security groups, ALB, ASG, RDS, S3, scaling policies, and CloudWatch alarms.
- Built a serverless e-commerce migration proof of concept using API Gateway, Lambda, DynamoDB, Cognito, CloudFront, EventBridge, SQS, and Step Functions to support persistent cart data and asynchronous checkout processing.
- Validated end-to-end cloud behavior through load balancer access testing, Auto Scaling recovery, private S3 media upload testing, RDS Multi-AZ and read replica verification, API requests, DynamoDB persistence, and CloudWatch logs.

EDUCATION

Master of Information Technology Deakin University	2024 - 2026
Bachelor of Engineering in Information Technology Hanoi University of Science and Technology (HUST)	2017 - 2022
